

Initial lateral repair work begins this week.

The contractor is installing cleanouts outside the homes. There will be no interruption of service for homeowners. After all the cleanouts are installed, the contractor will return to install the liner in the laterals. Individual laterals will be measured for the exact length of lining required. Each property is unique, and a specific liner length for each property will be ordered.

You will be notified when the contractor is going to install the liner in your lateral where there will be a brief interruption of service

Vac Truck for the cleanouts.

An area approximately 2 ft x 1 ft of dirt/ground is “Vacuumed” out where the cleanout will be installed.

Clean out installed

The cleanout *is* TEMPORARILY installed above ground. This will be cut down and be below grade (approximately 12 inches) when the lateral repair is complete.
